ART UNIT

PAPER NUMBER

2193

DATE MAILED: 03/08/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/842,527	Applicant(s) ANDERSON ET AL.	
	Examiner Insun Kang	Art Unit 2193	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 06 December 2005.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-49 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-49 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This action is in response to the amendment filed 12/6/2005.
2. As per applicant's request, claims 36, 43, and 48 have been amended. Claims 1-49 are pending in the application.

Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

4. Claims 36-39, 43-46, and 48-49 are non-statutory because they are directed to a system without recitation of a computer or a computer-readable medium embodying the claimed program elements. Although the independent claims start out reciting a "computer implemented system," the system does not have structural elements as a physical system. The classes, compiler, interface, code generator, etc that the system comprises are disembodied arrangements so as to be called a "computer program" or compilation of facts, information, or data *per se*, without creating any functional interrelationship, either as part of the stored data or as part of the computing processes performed by the computer ("acts") or computer readable medium so as to enable the computer to perform the claimed elements such as converting the neutral representation into a high-level language code as recited. With no other structure in the independent claims to rely on, the alleged "system" of the independent claims turns out to be non-statutory for being a computer program *per se*. Thus the claims represent non-functional descriptive material that is not capable of producing a useful result, and

Art Unit: 2193

hence represent only abstract ideas. Therefore, the claims are non-statutory.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1-49 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gustafsson et al. (US Patent 6,067,413) hereinafter referred to as "Gustafsson" in view of Dyer ("Java Decompiles compared," Java World, 7/1997).

Per claim 1:

Gustafsson discloses:

- a language-neutral representation of a compile unit transformable to at least one of a plurality of different types of code representations (Gustafsson, i.e. col. 2 lines 39-59)
- a hierarchal arrangement of program elements that neutrally characterize the compile unit (i.e. "col. 2 lines 39-59)
- at least one of the program elements representing a type declaration that characterizes at least one class of programmatic constructs of the compile unit (i.e. col. 2 lines 39-59).

Gustafsson does not explicitly teach converting the language neutral representation of the compile unit to a corresponding representation of the compile unit

Art Unit: 2193

in at least one high-level language code. However, Dyer teaches that such decompiling method was known in the art of software development, at the time applicant's invention was made, to convert a compiled code into the original source code (page 1). It would have been obvious for one having ordinary skill in the art of computer software development to modify Gustafsson's disclosed system to use a decompiler. The modification would be obvious because one having ordinary skill in the art would be motivated to "reverse-engineer compiled code (page 1, summary)" as suggested by Dyer.

Per claim 2:

The rejection of claim 1 is incorporated, and further, Gustafsson discloses:

-a collection of at least one member that characterizes programmatic attributes associated with and able to be implemented within the at least one class (Gustafsson, i.e. col. 3 lines 38-56) as claimed.

Per claim 3:

The rejection of claim 2 is incorporated, and further, Gustafsson discloses an expression class within the at least one class (Gustafsson, i.e. col. 3 lines 38-56) as claimed.

Per claim 4:

Art Unit: 2193

The rejection of claim 2 is incorporated, and further, Gustafsson discloses a statement class within the at least one class (Gustafsson, i.e. col. 3 lines 38-56) as claimed.

Per claim 5:

The rejection of claim 2 is incorporated, and further, Gustafsson discloses a namespace that contains the at least one class (Gustafsson, i.e. col. 3 lines 38-56) as claimed.

Per claim 6:

The rejection of claim 1 is incorporated, and further, Gustafsson discloses at least one of the program elements of the hierarchal arrangement encapsulates another of the program elements (Gustafsson, i.e. col. 3 lines 38-56) as claimed.

Per claim 7:

The rejection of claim 1 is incorporated, and further, Gustafsson discloses the interface being operative to enable transformation of the language-neutral representation to a corresponding desired code representation (Gustafsson, i.e. col. 3 lines 38-56) as claimed.

Per claim 8:

The rejection of claim 7 is incorporated, and further, Gustafsson discloses that the program elements comprise objects, each object exposing at least one of a method, attribute, and property of each respective object, the interface being operative to employ the at least one of method, attribute and property to facilitate the transformation into the desired code representation (Gustafsson, i.e. col. 3 lines 38-56) as claimed.

Art Unit: 2193

Per claim 9:

The rejection of claim 7 is incorporated, and further, Gustafsson discloses a compiler interface programmed to enable transformation of the language-neutral representation to a corresponding representation in a low-level language code (Gustafsson, i.e. col. 3 lines 38-56) as claimed.

Per claim 10:

The rejection of claim 9 is incorporated, and further, Gustafsson discloses an assembly of computer-executable instructions (Gustafsson, i.e. col. 3 lines 38-56) as claimed.

Per claim 11:

The rejection of claim 7 is incorporated, and further, Gustafsson discloses a code generator interface programmed to enable conversion of the language-neutral representation to a plurality of corresponding representations, wherein each representation is in a different high-level language code (Gustafsson, i.e. col. 3 lines 38-56) as claimed.

Per claim 12:

The rejection of claim 1 is incorporated, and further, Gustafsson discloses -the program elements comprise instances of a plurality of language-neutral classes, each instance defining an associated object (Gustafsson, i.e. col. 3 lines 38-56) as claimed.

Per claim 13:

Art Unit: 2193

The rejection of claim 12 is incorporated, and further, Gustafsson discloses at least one associated object represents the type declaration, at least another object being encapsulated within the at least one object representing the at least one type declaration, the at least another object representing program code of the compile unit that derives from a class associated with the at least type declaration (Gustafsson, i.e. col. 3 lines 38-56) as claimed.

Per claim 14:

Gustafsson discloses:

-A language-neutral representation of compile unit (Gustafsson, i.e. col. 3 lines 38-56) - an instance of at least one of a plurality of language-neutral classes, the plurality of classes representing different programmatic constructs of a compile unit and having a hierarchal relationship relative to each other, whereby transformation of the instance into a different representation of the respective programmatic construct is facilitated (col. 3 lines 38-56)

Gustafsson does not explicitly teach converting the instance of ...language neutral ... to a corresponding ...representation ... in at least one high-level language code. However, Dyer teaches that such decompiling method was known in the art of software development, at the time applicant's invention was made, to convert a compiled code into the original source code (page 1). It would have been obvious for one having ordinary skill in the art of computer software development to modify Gustafsson's disclosed system to use a decompiler. The modification would be obvious

Art Unit: 2193

because one having ordinary skill in the art would be motivated to “reverse-engineer compiled code (page 1, summary)” as suggested by Dyer.

Per claim 15:

The rejection of claim 14 is incorporated, and further, Gustafsson discloses -each instance of a corresponding class of the plurality of classes represents a respective programmatic construct of the compile unit, the plurality of instances being organized in a hierarchal relationship based on the classes associated with the plurality of instances and relationships among the programmatic constructs represented thereby (Gustafsson, i.e col. 3 lines 38-56).

Per claim 16:

The rejection of claim 15 is incorporated, and further, Gustafsson discloses that each of the plurality of instances exposes at least one item associated with the programmatic construct represented thereby (Gustafsson, i.e col. 3 lines 38-56).

Per claim 17:

The rejection of claim 16 is incorporated, and further, Gustafsson discloses - at least one of the plurality of instances represents a type declaration, at least another instance being encapsulated within the instance representing the type declaration, the at least another instance representing a programmatic construct that derives from the at least type declaration(Gustafsson, i.e col. 3 lines 38-56).

Per claim 18:

Art Unit: 2193

The rejection of claim 17 is incorporated, and further, Gustafsson discloses at least one of a statement and an expression(Gustafsson, i.e col. 3 lines 38-56).

Per claim 19:

The rejection of claim 16 is incorporated, and further, Gustafsson discloses an interface that enables transformation of the language neutral representation to the different representation, the interface employs the at least one item to facilitate the transformation of the language-neutral representation into the different representation (Gustafsson, i.e col. 3 lines 38-56).

Per claim 20:

The rejection of claim 19 is incorporated, and further, Gustafsson discloses a compiler interface programmed to enable transformation of the language-neutral representation to the corresponding different representation in a low-level language code (Gustafsson, i.e col. 3 lines 38-56).

Per claim 21:

The rejection of claim 20 is incorporated, and further, Gustafsson discloses an assembly of computer-executable instructions (Gustafsson, i.e col. 3 lines 38-56).

Per claim 22:

The rejection of claim 19 is incorporated, and further, Gustafsson discloses a code

Art Unit: 2193

generator interface programmed to generate a plurality of corresponding representations from the language-neutral representation, wherein each representation is in a different high-level language code from the language-neutral representation (Gustafsson, i.e col. 3 lines 38-56).

Per claim 23:

Gustafsson discloses:

- A language-neutral representation of ...transformable to at least one other type of software code representation (Gustafsson, i.e col. 3 lines 38-56).
- a hierarchal arrangement of objects, each object representing a different program element of the compile unit class (Gustafsson, i.e col. 3 lines 38-56).
- at least one class object that represents at least one defined class of program elements of the compile unit; at least one member object associated with the at least one class object that represents computer-executable instructions operable on at least some program elements in the at least one defined class(Gustafsson, i.e col. 3 lines 38-56).

Gustafsson does not explicitly teach converting the language neutral representation of computer executable instructions into a corresponding representation in at least one high-level language code. However, Dyer teaches that such decompiling method was known in the art of software development, at the time applicant's invention was made, to convert a compiled code into the original source code (page 1). It would have been obvious for one having ordinary skill in the art of computer software development to

Art Unit: 2193

modify Gustafsson's disclosed system to use a decompiler. The modification would be obvious because one having ordinary skill in the art would be motivated to "reverse-engineer compiled code (page 1, summary)" as suggested by Dyer.

Per claim 24:

The rejection of claim 23 is incorporated, and further, Gustafsson discloses a namespace object that represents a namespace of the compile unit, the namespace object comprising a collection of class objects including the at least one class object (Gustafsson, i.e col. 3 lines 38-56).

Per claim 25:

The rejection of claim 24 is incorporated, and further, Gustafsson discloses a plurality of member objects associated with the at least one class object, wherein the at least one class object represents a common base class that is shared by the plurality of member objects (Gustafsson, i.e col. 3 lines 38-56).

Per claims 26-31, these claims are another versions of the claimed representation discussed in claims 18-22, respectively, and are rejected for the same reasons set forth in connection with the rejections of claims 18-22 above.

Per claims 32-35, these claims are another versions of the claimed representation discussed in claims 18-22, respectively, and are rejected for the same reasons set forth in connection with the rejections of claims 18-22 above.

Art Unit: 2193

Per claims 36-39, these claims are system versions of claims 23-26 and 31, respectively, and are rejected for the same reasons set forth in connection with the rejections of claims 23-26 above.

Per claim 40, it is the computer-readable medium version of claim 14, respectively, and is rejected for the same reasons set forth in connection with the rejection of claim 14 above.

Per claim 41, 42, it is the method version of claim 39, respectively, and is rejected for the same reasons set forth in connection with the rejection of claim 39 above.

Per claims 43-45 and 46, these claims are system versions of claims 37 and 38 respectively, and are rejected for the same reasons set forth in connection with the rejections of claims 37 and 38 above.

Per claim 47, it is the method version of claim 29, respectively, and is rejected for the same reasons set forth in connection with the rejection of claim 29 above.

Per claim 48 and 49, it is the system version of claim 30, respectively, and is rejected for the same reasons set forth in connection with the rejection of claim 30 above.

Response to Arguments

7. Applicant's arguments filed 12/6/2005, with respect to the common ownership have been fully considered and are persuasive. The rejection of claims 1-49 by Bosworth has been withdrawn. Therefore, this action is made non-final.

Art Unit: 2193

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Insun Kang whose telephone number is 571-272-3724. The examiner can normally be reached on M-F 9:30-6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kakali Chaki can be reached on 571-272-3719. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

Any inquiry of a general nature or relating to the status of this application should be directed to the TC 2100 Group receptionist: 571-272-2100.
